

POTATOES FUEL PERFORMANCE

A nutritional powerhouse, potatoes are a popular, nutrient-rich vegetable that provides fuel and replenishment for athletic performance.*

CARBOHYDRATES

Potatoes have **26 grams of carbohydrate per serving, which is 9% of the daily value.** Carbohydrates are a key source of energy for muscles to help you fuel, perform and recover.¹ Carbohydrates are also important for optimal physical and mental performance.²

IRON

Potatoes have **1.1 mg of iron per serving, which is 6% of the daily value and more than half the amount in a 3-ounce beef patty (2.06 mg per serving).**³ Iron is a mineral involved in making proteins that carry oxygen to all parts of the body, including to the muscles.

VITAMIN C

Potatoes have **27 mg of vitamin C per serving, which is 30% of the daily value.** Potatoes are considered to be an excellent source of this antioxidant. Vitamin C aids in collagen production—a major component of muscle tissue—and supports iron absorption.⁴

VITAMIN B6

Potatoes have **0.2 mg of vitamin B6 per serving, which is 10% of the daily value and considered to be a good source.** Vitamin B6 plays important roles in carbohydrate and protein metabolism.

POTASSIUM

Potatoes have **620 mg of potassium per serving, which is 15% of the daily value and more than a medium-sized banana (422 mg per serving).**³ Potassium is an electrolyte essential for muscle functioning. Potassium is lost in sweat, so it needs to be replenished for optimal performance.²

PROTEIN

Potatoes have **3 grams of protein per serving.** Protein is a key component of muscle and an important nutrient for athletic performance.

FIBER

Potatoes have **2 grams of fiber per serving, which is 7% of the daily value.** Dietary fiber has been shown to have numerous health benefits, including improving blood lipid levels, regulating blood glucose and increasing satiety.⁵

Potatoes. Real Food. Real Performance.[®]
